Then, you can move the window on the computer screen by using the arrow keys on your keyboard. To exit the Adobe Photoshop window, you can click the X button in the top right corner of the window. Also, I added that I looked up the.psd file and it is large as a.psd file can possibly get. In the \"Display\" panel, the file is 10.4GB. The 10.4GB file does not open when I try to load it up. I'm pretty sure it's because it's too large. The file opens, but it freezes up the computer. I only tried to open the file once on my computer, so I don't know if opening it in either the.psd or.psb format will yield a smaller PSD file. After editing this, I tried it in Photoshop Elements 2 and I was able to open the file in that application only. Maybe I'd have a different experience using Elements (we'll find out when I try Photoshop Elements 8 in another month). How time-saving is it? You can save a project from **any photo editing application**, not just Photoshop. Further, money is no object at Aperture, where all editing is free.
