Since Photoshop CC is the latest version of the software, it comes with many advanced features like smart guides, templates, and smart objects. The new features also include some new features like Radial Blur, Gradient Mesh, Gradient Mesh Brush, Gradient Mesh Brushes, Gradient Mesh Fill, and new Quick Selection. New features also include the new Live Sharpen tool. In a nutshell, the new features make the Photoshop CC users to enhance their work. Adobe also announced that it is doing away with the monthly subscription fee for Photoshop. Instead, users will pay only for the number of people on their team, or the number of pieces of software they use from Adobe. And that's great news for a lot of professionals, including designers and photographers. Some of the top new features in 2020 include the visual effects toolkit, the **creative engine**, the **artboards** and **improved AI.** These features are already being tested in the latest Photoshop version and you can expect them to be added to Photoshop in future. When Photoshop was launched in 1994, the tool was completely different

from what it is today. At that time, the software had a very rough user interface and, of course, the price was heavy. It was in the 90's that Adobe developed the Adobe Photoshop Elements, a light weight version of the software. The later version was available at very affordable prices. Photoshop, as we know, has evolved numerous times over the time and continues to do so in the present age.
