It would have been better to have the Review panel appear above the panel where your comments appear. You could drag your panel from one image or document to another and it would still be in action. This design would have greater discoverability for Adobe's customers. Overall, I think Adobe integrated too many features into this update and they should have been better organized. I'd still say this is a good update, but I don't think it's something that you can endorse without reservation. Adobe has done a fantastic job making Photoshop fast and the time-saving features like Smart Sharpen and the new Reflections filter are welcome. Adding the panel where your reviews appear would have been the best way to do it. This approach would put the focus on users rather than Photoshop engineers. The latest update, which Adobe calls both Version 15 and Premiere Pro 2018, brings dozens of performance improvements, support for tightly packed 4K videos, an improved user interface and more. New features include two new multicamera feature tracks, the Blueprint Creative Control panel, a new Swirl sticker panel for titling animated 3D projects, and editing of 360-degree videos. The new users interface has been streamlined and the entire user interface has been revised. As can be seen from the screenshot below, the panel layout is totally rearranged. All panels have been moved to a more logical and intuitive place. The Start Screen is now a rectangle rather than a grid containing multiple rows of icons. Instead of the tabs being "swivelly" within the Start Screen, they are now real buttons. It's pleasant to use and it works much better than the former setup. You can add contextual menus for faster access to settings. I'm not sure I want to use the new scroll bar in the Shared panel, but I like the ability to scroll between panels without clicking one of them.

While Photoshop is an easy place to start if you don't already know what you're doing with image editing, it's also one of the best places to go if you already have a good handle on the cutting edge of photo editing. New features famously creep up on you until you notice them. Anyone who uses their phone to do anything other than look at large real estate listings today probably already knows about this feature (also available through the Photos app on iPads and iPhones). With the future of mobile photography centered on the phone itself, companies are working on ways to make the experience as seamless and productive as possible. And apps on these phones will get better and better at doing that, not least because they're using popular photo-editing software such as the likes of Shutterstock's **Camera Uploads** feature. **Adobe Photoshop**, too, will have its own crop-and-enhance buttons built into its detailed interface. That's a move designed to streamline editing compared to the more oriented interface in the editing app's sibling *Adobe Lightroom*. Of course this same process of editing images on the phone works fine on the desktop, but the iPhone's small screen may not be the best way to edit an image. When happens, the default method will be to snap a final photo or a portfolio, and then start editing (on the new iPhone 11 Pro, for instance). In fact, the feature 'might be' be one of the best yet, as it's designed to let you edit several pictures without having to move from the phone.
